

**SAT's new approval for CRJ 100/200 and CRJ700/900**

February 16, 2010

Zurich Airport – The Federal Office of Civil Aviation (FOCA) has confirmed the EASA Part 147 approval of Swiss AviationTraining as a provider of maintenance type rating training for the Bombardier CRJ100/200 and CRJ700/900 aircraft types.

These latest EASA approvals will enable Swiss AviationTraining (SAT) to further expand its training services portfolio. SAT now holds the full range of maintenance training approvals for the various jet aircraft used on regional air services around the world. The company already offers B1, B2, combined B1+B2, C, A and Level 2 technical training courses and practical training for the Avro 146/RJ, the Embraer ERJ 135/145/Legacy, the EMB 170/190/Lineage and the Saab 2000.

SAT can thus continue to build on its extensive expertise and its many years of experience in providing training services for regional aircraft types.

Swiss AviationTraining also has a first customer for its new Bombardier maintenance type rating training: Lufthansa Technik of Stuttgart, Germany. Bombardier has already delivered a total of over 1 500 CRJ aircraft of its various -100 to -900 types until today.
